PROFESSIONAL SUMMARY

Frontend Software Engineer with **3 years** of experience shipping complex, production-grade SaaS products at scale. Known for taking on challenges, delivering under tight deadlines, and driving features from architecture through deployment. Strong expertise in React, TypeScript, and micro-frontend architecture with experience building complex user interfaces including component libraries, workflow visualization systems, real-time dashboards, and a track record of measurable performance improvements and reusable library development.

WORK EXPERIENCE

LeadSquared

Aug 2023 – Present

Software Engineer – Frontend

Bengaluru, India

- Owned and maintained the **Service Cloud Admin UI and Agent UI** - the core frontend applications for an enterprise CRM ticketing platform used by **500+ agents globally** - delivering **40+ major feature releases** across ticketing, chat, workflow, RBAC user management, and ticket automation modules.
- Architected and shipped the **Process Builder UI** end-to-end using **React Flow** - a visual drag-and-drop workflow engine enabling enterprise clients to define conditional ticket routing across teams. Replaced a fully manual, error-prone assignment process; now powers **50+ active workflows** across **3 enterprise clients**.
- Designed and built the **Tenant Monitoring and Insights Dashboard** from scratch - a full internal product giving product managers, support teams, and DevOps real-time visibility into tenant health, churn risk, anomaly detection, CSAT, TAT trends, and infrastructure status. Enabled the support team to proactively reach out to at-risk tenants before escalation.
- Engineered the **Data Migration UI** - a multi-step ETL workflow supporting field mapping, data validation, sample migration, delta extraction, contact/group/lookup mapping, and go-live migration. Delivered a complete, self-serve migration experience that supported **14+ tenant migrations** from external CRM platforms with minimal manual intervention.
- Built and maintained the **Advanced Search micro-frontend library** - a reusable, versioned query builder supporting nested conditions, dynamic operators, custom fields, and schema deduplication. Published and adopted across **4 production applications**, eliminating duplicate implementations and cutting integration effort for each new consumer significantly.
- Led the **Ticket Details redesign**, enabling seamless ticket switching within the details view without navigating back to the list. Implemented **virtualized scrolling** via Virtuoso and lazy-loaded containerized components with error boundaries, reducing initial page interaction time by **35%** and eliminating full-page reloads on ticket navigation.
- Drove **frontend performance optimization** across the Agent UI using **Webpack 5** - code splitting, tree shaking, Brotli compression, chunk tuning, and vendor bundle separation reduced bundle size by **40%** and improved Time-to-Interactive by **2.5 seconds**.

LeadSquared

Aug 2022 – Aug 2023

Software Engineer Intern – Frontend

Bengaluru, India

- Contributed to both the **Customer360 Agent UI** and **Admin platform** across a full product cycle — implementing custom widget configuration, dynamic layout support, ticket association, form management, and localization on the agent side, while building the admin infrastructure including widget preview flows, grid performance optimizations, and **micro-frontend container setup** for independently deployable admin and agent modules.
- Delivered foundational UI for the **Ticket Automation** and **RBAC** modules — including trigger card creation, automation rule configuration, role and permission layout, and custom table filtering — work that shipped to production and remained part of the core platform post-internship.

Samsung PRISM

Jun 2021 – Jan 2022

Research & Development Intern

Bengaluru, India

- Selected for **Samsung's competitive R&D internship program** to build a **Bixby voice capsule** integrating Open Library and Internet Archive APIs — enabling conversational book search, metadata retrieval, and page-wise reading through voice commands.
- Designed a voice-first reading engine with **SSML-based narration**, OCR text extraction, and stateful page navigation, delivering a complete eBook discovery and listening experience through natural language interaction.

EDUCATION

Institute of Technical Education and Research

Bhubaneswar, India

Bachelor of Technology in Computer Science and Engineering | GPA: 8.29

2019 – 2023

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS

Frontend: React

State Management: Redux, Context API

Styling: Tailwind CSS, Ant Design, Material UI

Libraries & Tools: React Flow, Froala Editor, Axios, Fetch API

Testing: Jest, React Testing Library

Build Tools: Webpack 5, Vite

Monitoring: New Relic, Grafana

Version Control: Git
